Cisco Progressive Packet Tracer

BASIC:

En entrant la commande ping 192.168.1.13 entre le PC 1 et PC 2 cela induit un échec, en effet l'adresse IP est différente de celle du PC 2 (et du PC 1). (echec test de connectivité).

```
🏴 PC 1
 Physical
           Config
                  Desktop
                            Programming
                                         Attributes
 Command Prompt
 Cisco Packet Tracer PC Command Line 1.0
 C:\>ping 192.168.1.3
  Pinging 192.168.1.3 with 32 bytes of data:
  Request timed out.
  Request timed out.
  Request timed out.
  Request timed out.
  Ping statistics for 192.168.1.3:
      Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
  C:\>
```

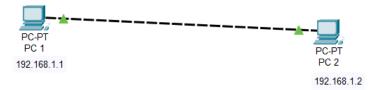

Lorsque l'on Ping avec les bonnes adresses IP le ping est positif, les PC sont donc connectés. (réussite test de connectivité).

```
C:\>ping 192.168.1.1
Pinging 192.168.1.1 with 32 bytes of data:

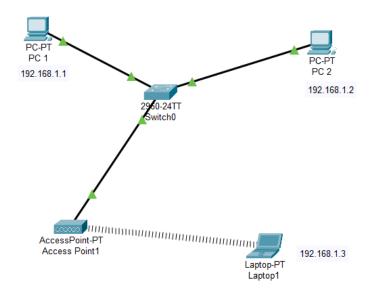

Reply from 192.168.1.1: bytes=32 time=45ms TTL=128
Reply from 192.168.1.1: bytes=32 time=23ms TTL=128
Reply from 192.168.1.1: bytes=32 time=24ms TTL=128
Reply from 192.168.1.1: bytes=32 time=36ms TTL=128
Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 23ms, Maximum = 45ms, Average = 32ms
```

Pouvez-vous me dire quelle est la différence entre Fast Ethernet 0/1 et 1/1 ?

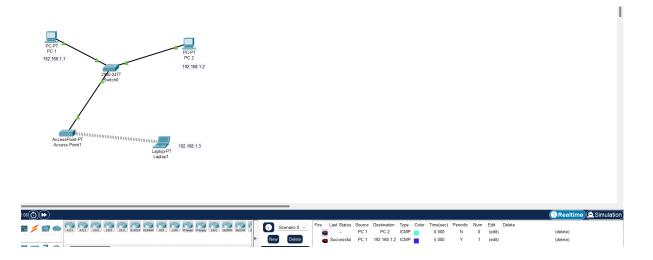

Cela réside dans une différence (numérotation) d'emplacement (slot), ici 0/1 et 1/1 sont deux interfaces Fast Ethernet l'une situé sur le slot (emplacement) 1 et l'autre sur le slot (emplacement) 2.
